Webstar Business Services SEO Audit

Oct 19, 2026 · @Pratyksh Sharma

Summary

webstarbusinessservices.com is technically clean and well structured for local search, scoring **72/100** overall. Speed and proof are holding it back: one 3 MB background photo makes the mobile homepage take 18.8 seconds to show its main content, and the site has only one live portfolio example.

Area	Score	Verdict
Technical SEO	92	Strong: HTTPS, redirects, canonicals, sitemap and schema all correct
On-page SEO	70	Good structure; 40 of 58 titles and 29 descriptions are too long and get cut off in Google
Content & keywords	75	30+ unique city and industry pages; thin portfolio, examples and wedding pages
Page speed	55	Mobile performance 69, LCP 18.8 s; desktop 79
Local SEO	70	Google Business Profile linked; no site-wide LocalBusiness schema or Google review links; citations unverified

Area scores are our judgement from this audit; the overall score is their average. PageSpeed figures are Google's.

Biggest problems

1. **A 3 MB homepage background image** (IMG_4687.JPG) is 86% of the page's weight and makes LCP 18.8 s on mobile.
2. **Titles and descriptions get truncated.** 40 titles exceed 60 characters, mostly because "— Webstar Business Services" adds 27 characters to each.
3. **Thin proof.** /examples/ shows one client site, and the whole site has only 9 meaningful images, so city and industry pages have nothing visual to back their claims.

4. **Wedding pages are invisible to search.** /weddings/ and its two subpages render their content with JavaScript, have no schema, and serve 48–154 words to crawlers.

Quick wins

- Compress IMG_4687.JPG to WebP under 200 KB and preload it: expect mobile LCP under 4 s.
- Shorten the title suffix to "| Webstar" site-wide.
- Convert the Galano .otf fonts to .woff2.
- Add LocalBusiness (ProfessionalService) details to the existing Organization schema.

Site overview

The site is a hand-built static site with 58 URLs in its sitemap, all returning 200 and all indexable.

Check	Result
Pages in sitemap	58: 13 core and hub pages (home, packages + 3 tiers, plans, process, examples, about, contact, service areas, industries, resources), 10 city pages, 4 region pages, 5 service pages, 13 industry pages, 7 guides, 3 legal pages, 3 wedding pages
Status codes	All 58 return 200; unknown URLs return a real 404
robots.txt	Allows everything except /clients/ and /portal/; points to the sitemap
Sitemap	/sitemap.xml with lastmod dates (updated 15–16 Oct 2026)
Noindex pages	None
Tracking	Google Analytics 4 and Google Tag Manager both load
Search Console	Not checked: needs access. Confirm how many of the 58 pages Google has actually indexed

Technical SEO

The technical foundation is strong; the only real issue is the JavaScript-rendered wedding section.

Check	Status	Finding
HTTPS and HSTS	Pass	http:// and non-www redirect to https://www.; HSTS header set
Trailing slash duplicates	Pass	/packages and /packages/ both load, but the canonical points to /packages/
Canonical tags	Pass	All 58 pages self-canonical
404 handling	Pass	Unknown URLs return a true 404
Mobile	Pass	Viewport set; Lighthouse SEO 100, Best Practices 100
Structured data	Pass	55 of 58 pages carry valid JSON-LD: Organization, WebSite, BreadcrumbList, Service, FAQPage, Article, HowTo
Wedding section	Fail	/weddings/, /weddings/services/ and /weddings/examples/ are a JavaScript app: 4 KB of HTML, 48–154 words for crawlers, no schema
Language	Pass	`lang="en"` on every page
Accessibility	Minor	Lighthouse accessibility 96 mobile / 95 desktop; some text fails colour contrast

Fix: render the wedding pages as static HTML like the rest of the site. Or, if they are a separate brand, move them to their own domain so they don't dilute the Metro Detroit business topic.

On-page SEO

Every page has a unique title, a unique description and one H1, but most titles and descriptions are too long, so Google cuts them off.

Element	Pages OK	Issue
Title tags	18 of 58	40 are over 60 characters; 50 end with "— Webstar Business Services" (27 characters)
Meta descriptions	28 of 58	29 are over 160 characters (homepage 197, /packages/ 244); 1 is under 70
H1	57 of 58	/weddings/examples/ has no H1 in its HTML
Duplicate titles or descriptions	58 of 58	None
Image alt text	69 of 69	9 content images have alt text; 60 star icons are correctly marked decorative (`alt=""`)
Open Graph tags	58 of 58	Title and image set on every page

Titles. Switching the suffix to "| Webstar" brings 33 of the 40 long titles under 60 characters. Shorten the other 7 by hand:

Current title (with new suffix)	Length	Suggested
How to Get Your First 10 Google Reviews (Without Being Pushy) | Webstar	71	How to Get Your First 10 Google Reviews | Webstar
Webstar Weddings — Custom Wedding Websites & Digital Invitations	64	Custom Wedding Websites & Digital Invitations | Webstar
Guides & Resources — Michigan Small Business Websites | Webstar	63	Small Business Website Guides | Webstar
Wix & Squarespace vs a Custom Small Business Website | Webstar	62	Wix & Squarespace vs a Custom Website | Webstar
Web Design Service Areas — Metro Detroit & Michigan | Webstar	61	Web Design Service Areas in Metro Detroit | Webstar
Google Business Profile Checklist for Metro Detroit | Webstar	61	Google Business Profile Checklist (Detroit) | Webstar

Current title (with new suffix)	Length	Suggested
Website Launch Checklist: Domain, Hosting & Go-Live | Webstar	61	Website Launch Checklist: Domain & Hosting | Webstar

Industry pages miss the location. "Web Design Services for Restaurants" competes nationally. "Restaurant Website Design in Metro Detroit" targets buyers Webstar can actually serve. Apply the same pattern to all 13 industry titles and H1s.

Descriptions. Trim to 140–155 characters, lead with the service and place, and end with one concrete detail (price from $350, Google Business Profile included).

Content and keywords

The page structure targets the right local searches; the gaps are proof and depth, not more pages.

What works

- **The city and industry pages are genuinely unique.** Sample pairs share only 2–16% of their text (Troy vs Royal Oak 4%, Plumbers vs Law firms 16%), so Google is unlikely to treat them as doorway pages.
- **The core pages have solid depth:** about 400–830 words each, with FAQ schema on 38 pages.
- **The 7 guides answer real buyer questions,** such as website cost in Michigan, Wix vs custom, and Google Business Profile setup.

Gaps

Page	Words	Problem
/examples/	154	One client site (Chrome City Guide Service); no screenshots, results or story
/contact/	238	Fine for a contact page; add the service area and a map of it
/accessibility/	359	Legal page; fine
/resources/	386	A list of guides; add a short intro on who they're for

Page	Words	Problem
/packages/business-growth-website/	398	The highest-value package has the least content of the three tiers
/weddings/ (3 pages)	48–154	JavaScript-only; see Technical SEO

Keywords to own. These match pages that already exist. Search volumes still need confirming in Semrush or Google Keyword Planner; the Semrush free quota ran out during this audit.

Keyword	Page that should rank
web design Metro Detroit / Detroit web design	/web-design-services-metro-detroit/, /web-design-services-detroit/
web design Troy MI, Royal Oak, Novi, Ann Arbor (each city)	the matching city page
small business website cost Michigan	/website-cost-michigan/ + the 2026 cost guide
affordable website design Michigan	/affordable-website-design-michigan/
website as a service / website subscription	/plans/
Google Business Profile setup Detroit	/google-business-profile-setup/
restaurant / contractor / salon website design Detroit	the matching industry page, once the title includes Detroit

Content to add

1. **3–5 case studies,** one per main industry, each with the business, a before-and-after screenshot, and a result (calls, Google Maps views, rankings). This is the biggest content gap.
2. **One real project photo or screenshot on each city and industry page.** The site has only 9 content images across 58 pages.
3. **Build out the Business Growth package page** to the depth of the other two tiers.
4. **Link each guide to the service page it supports,** for example the cost guide to /packages/ and the GBP checklist to /google-business-profile-setup/.

Page speed and Core Web Vitals

The homepage scores 69 on mobile because one photo takes 18.8 seconds to load on a mid-range phone. The rest of the page is light.

Metric (homepage, PageSpeed Insights)	Mobile	Desktop	Google's "good" threshold
Performance score	69	79	90+
Largest Contentful Paint	18.8 s	3.3 s	under 2.5 s
First Contentful Paint	2.6 s	0.8 s	under 1.8 s
Total Blocking Time	90 ms	30 ms	under 200 ms
Cumulative Layout Shift	0.022	—	under 0.1
Total page weight	3,511 KB	—	under 1,600 KB

Real-user Core Web Vitals: no data, because the site has too little traffic for Chrome to report.

Causes, in order of impact

1. **/assets/images/IMG_4687.JPG is 3,010 KB,** loaded as a CSS background, so the browser finds it late. It is 86% of the page's weight and it is the LCP element.
2. **The custom font loads as .otf** (GalanoClassicAltRegular.otf) instead of compressed .woff2.
3. **About 144 KB of unused JavaScript,** most likely from Google Tag Manager and a separate gtag script both loading. If GTM already fires GA4, remove the separate gtag script.

Fix: export the image at 1,920 px wide as WebP or AVIF (target under 200 KB), add `<link rel="preload" as="image">` for it, and serve a smaller version below 768 px. That alone should bring mobile LCP under about 3 s and the score into the high 80s or 90s. Re-test in PageSpeed Insights after deploying.

Server response averaged about 260 ms across all 58 pages, which is fine.

Local SEO

Webstar is set up correctly as a service-area business, but its schema and off-site signals don't yet tell Google where and how well it serves.

Signal	Status	Finding
Name, phone, email	Pass	Webstar Business Services LLC, 248-564-3663, ian@webstarbusinessservices.com in the footer of every page
Address	OK	No street address, which is correct for a service-area business; footer says "Metro Detroit, MI"
Google Business Profile	Linked	Organization schema `sameAs` points to the Maps listing; the homepage mentions GBP setup
Business schema type	Gap	Organization + ProfessionalService on one page only; no LocalBusiness with `areaServed` cities, `priceRange` or opening hours site-wide
Reviews on site	Partial	Homepage has a "What clients say" section; no link to leave or read Google reviews
City pages	Strong	10 city + 4 region pages with unique copy
Citations	Not checked	Verify Yelp, BBB, Bing Places, Apple Business Connect, Nextdoor and the Michigan chamber listings use the same name and phone

Fixes

1. **Upgrade the homepage schema** to `ProfessionalService` (a LocalBusiness subtype). Include `areaServed` listing the 10 cities and 3 counties, `telephone`, `priceRange` ("$350–$$$"), `logo` and `sameAs` for every profile.
2. **Add a "Read our Google reviews" link and a review-request link** on /contact/ and in the footer. Then follow the site's own guide on getting your first 10 Google reviews.
3. **Set up Bing Places and Apple Business Connect,** and list on 5–10 Michigan and small-business directories with identical name, phone and website.
4. **Get links from local business groups** (chambers of commerce in Troy, Royal Oak, Birmingham-Bloomfield). Add a "Website by Webstar" footer credit on client sites, starting with Chrome City Guide Service.

Prioritized action plan

Do the first five this week. Together they fix the speed problem and every title and description that Google truncates.

#	Action	Impact
1	Compress and preload the homepage background image (IMG_4687.JPG, 3 MB to under 200 KB WebP)	High
2	Change the title suffix to "| Webstar" site-wide and hand-shorten the 7 remaining long titles	High
3	Trim the 29 long meta descriptions to 140–155 characters	Medium
4	Convert the Galano font from .otf to .woff2; remove the duplicate gtag if GTM already fires GA4	Medium
5	Upgrade the homepage schema to ProfessionalService with areaServed, priceRange and sameAs	Medium
6	Add "Metro Detroit" to all 13 industry page titles and H1s	Medium
7	Render the 3 wedding pages as static HTML, or move them to their own domain	Medium
8	Publish 3–5 case studies with screenshots and results; expand /examples/	High
9	Add a real project image to each city and industry page	Medium
10	Build citations (Bing Places, Apple Business Connect, Yelp, BBB, chambers) and add review links	High
11	Expand the Business Growth package page to the depth of the other tiers	Low

#	Action	Impact
12	Connect Search Console, check how many of the 58 pages are indexed, and confirm keyword volumes in Semrush	High

After items 1–5, re-test the homepage in PageSpeed Insights. The target is mobile performance 90+ and LCP under 2.5 s.
